

3.FACTORIAL CALCULATOR USING RECURSION

Description

A Java console application that calculates the factorial of a number using recursion.

Features

- Recursive factorial calculation
- Handles factorial of zero
- Prevents negative number calculation

Technologies Used

- Java

Concepts Used

- Recursion
- Methods
- Conditional Statements

How to Run

Run `Factorial.java`.

Sample Output

if $n > 0$:

Enter a number: 5

Factorial of 5 is: 120

If $n == 0$:

Enter a number: 0

Factorial of 0 is: 1

If $n < 0$:

Enter a number: -3

Factorial is not defined for negative numbers.
